Your SECURITY with
RALFKAIROS

Secure your IT assets and prevent from being compromised with RALFKAIROS. Assess your business vulnerability to attackers

1 We help you **secure** and better **reinforce** your IT system and train your **Team** in Korea and Europe with a customized approach that fits you best.

2 We **address** your corporate requests and/or we **assist** you thanks to our understanding of business processes, risks and IT issues.

IT Security Inspection

- ☑ Incident Management
- ☑ Patch Management
- ☑ Data privacy
- ☑ Monitoring Controls
- ☑ Physical security
- ☑ Healthcheck report

Risks, organization, processes & infrastructure

Compares actuel conditions with benchmarks

Conclusion report and Action Plan

High-level & interne proactive IT check

Survey ⟫ Docs inventory ⟫ Interviews ⟫ Infrastructure review

Cyber Bootcamp & Training

- ☑ Training program for entry level jobs in cybersecurity or reskill IT professionals
- ☑ In-demand skills development
- ☑ 20 Topics, +350 hours and remote coach. 2 to 4 months class
- ☑ Theoretical knowledge, real-world cases, hands-on exercises

Network
System
Pentest
Application

Audit

Penetration test

- ☑ Security exercise where our expert attempts to find and exploit vulnerabilities in a IT system
- ☑ Propose security upgrades to plug up any vulnerabilities discovered during the test
- ☑ Have a third party expert opinion and maintain trusts with your stakeholders

CISO Assistance

- ☑ Lead information security department
- ☑ Project Management
- ☑ Implementation and deployment
- ☑ Monthly incident report

CISO ON DEMAND | CISO ON CONTROL | CISO DELEGATION

Penetration Testing with
RALFKAIROS

Reduce your risk of a breach by identifying and exploiting business-critical vulnerabilities with ondemand penetration testing expertise

ABOUT RALFKAIROS

Founded in 2015, RALFKAIROS is a cybersecurity startup in Korea & France since 2015, selected at Seoul Fintech Lab and Youth Entrepreneurship Academy (Seoul City & Korean Government).

We provide audit, pentest, training, consulting and security market analysis for Korea & Asia

RALFKAIROS 's penetration testing services maximizes risk reduction, while minimizing any disruption to the business. We evaluate systems by subjecting them to external Internet attacks and/or by considering insider threats.

- Help our clients ensure that their IT systems are protected to the different threats spread over internet
- Demonstrate that a system or device is either susceptible or not susceptible to particular security weaknesses
- Provide clear recommendations for vulnerability mitigation that are straightforward to implement and tailored to the required functionality of the system being tested

Using our penetration testing services regularly helps our clients stay one step ahead of potential attackers, enabling their IT systems to grow with their business, while keeping the enterprise secure. Our approach to penetration testing provides a thorough, quality service with the flexibility necessary to test a wide range of IT systems.

RALFKAIROS EXPERTISE

Our team holds qualifications from Offensive Security and CREST, for network and web application testing. We offer seven broad areas of testing, which are normally combined to provide the optimal balance of testing.

- **Internal testing** is carried out while connected directly or close to the network under test, on either 'full knowledge' or 'zero knowledge' engagements. The purpose is to demonstrate that an IT system has been configured in a manner that makes it as secure as possible.

- **Internet testing** takes a "black box" (zero-knowledge) approach and is often used to understand what target information attackers can discover from the Internet and other public domain resources.

- **Remote testing** is conducted from external networks to which the IT system is connected. There is generally some sort of perimeter security, for example, a firewall or filtering router that is designed to limit the access available from a given external network to the IT system under test.

- **Web application testing** ensures that an application has been configured securely so that attackers cannot gain unauthorized access to it or its data; users cannot access data for which they are not authorized; and there are no vulnerabilities that users can leverage to gain access to services outside of their restricted operating environment.

Can your company's IT systems resist a hacker attack? Do you want to know it?

At RALFKAIROS , we have some of the best Ethical Hackers you will ever meet.

With the highest certification available, they know the hacker's methods and tools - and use them only for your benefit.

The test consists of a pre-agreed attack on your application.

Afterwards you receive a wrap-up meeting and a report, so you get a clear view of your company's or SaaS vulnerability.

Get in touch and learn more.
